

## Disaster Recovery for iSDM

### Syntax Disaster Recovery

Syntax understands the importance of Disaster Recovery as the area of business continuity planning that deals with protecting your company from the effects of significant negative events. These can include anything that puts your company's operations at risk: Crippling Cyber-attacks and Equipment Failures, for example, as well as fire, hurricanes, earthquakes or any other natural disaster.

Instead of building your Disaster Recovery infrastructure, consider a custom-tailored Private Cloud Solution from Syntax. Benefit from an on-demand IT environment and 24/7 operational support - all adaptable to your evolving business needs.

Syntax can create a custom Disaster Recovery Plan. Together we can document the policies, procedures and actions to limit the disruption to your company in the wake of a disaster.

### Disaster Recovery Rational

Purchasing and maintaining Disaster Recovery Systems will be a major initiative for firms over the next 12 months. A study by analyst firm Forrester found that 24% of large firms and 15% of small and medium sized enterprises consider Disaster Recovery to be a top priority. This trend is expected to increase over time.

### Syntax iSDM Includes:

## MANAGED SERVICES

### Syntax Disaster Recovery

Many businesses look at traditional High Availability and Disaster Recovery (HA/DR) solutions as desirable but unaffordable. Due to the high cost of “just-in-case” infrastructure and maintenance of redundant hardware, HA/DR requirements are often neglected. Fortunately, new cloud based HA/DR solutions are becoming more popular due to their resiliency, flexibility, scalability and relative low cost.

Syntax’s cloud based High Availability solutions use the latest replication technology to protect your systems and your users from experiencing delays or downtime.
